Nine Steps to De-Winterize Your Motorcycle

Even if you stored your motorcycle correctly in a garage all winter, there are still a few things you should check and do to ensure your bike is in optimal riding condition. A bike that's been stagnant for several months could have endured wear, especially if the area reached below freezing temperatures.

- **Replace fuel:** If you didn't drain your fuel tank before the start of winter, it is essential that you remove and discard the old fuel before your first ride of summer. Old fuel can cause issues by clogging lines, filters, jets or injectors. Plus, you want your first ride to be a smooth one with new, optimized fuel.
- **Check for rust:** If you did drain your tank or add fuel stabilizers to your gas, clean out any rust, gunk or condensation that may have built up during the colder months.
- **Inflate tires to proper PSI.** Flat or underinflated tires can increase the wear and tear to your bike. It can also increase your chances for an accident since poor tire quality makes bikes harder to handle. Check for flat spots, cracks and other damage on tires.
- **Rule out rodents:** Make sure your motorcycle wasn't the perfect home for a critter during the winter. Check your wires, saddlebags,

seat and tailpipe to rule out rodent damage and nesting.

- **Clean air filters:** Don't overlook cleaning your air filters, as this will improve the health of your engine.
- **Check your brakes:** How are your brake pads? Test your front and rear brake pads separately to ensure both are working optimally. Most brakes have a groove molded or cut into the surface. Once that groove is no longer visible, you know it's time to replace the brakes. Check your brake lines and brake fluid as well.
- **Charge your battery:** Make sure your battery is free from dust and corrosion. Then test the battery's charge.
- **Fill up the fluids:** It's better to drain all of your fluids and give the reservoirs a thorough cleaning than to just top them off. Replace your oil, brake fluid, coolant and hydraulic fluid.
- **Other crucial checks:** Check everything on your bike, from your belts and chains, to your lights and controls. Ensuring that everything is in ideal condition can make your ride smoother and help keep you safe. Don't forget to examine your helmet for any damage or wear, as well.

Spring is Time to Review Your Motorcycle Insurance Policy

Why Bother To Call Us About Your Policy?

Our lawyers have discovered that over 30% of the motorcycle insurance policies we review are flawed and have improper coverage! Get real advice on what kind of policy limits you need from legal experts, used to fighting with insurance companies, so that when the unexpected happens you know

you're covered. Let us cut through the noise for you with a **FREE** Motorcycle Insurance Policy Review. We do **NOT** sell insurance!
